

Alina Lomakina

Frontend Developer

.profile

Junior Frontend Developer with React stack development experience.

Enjoys creating engaging user interfaces and collaborating with designers/developers. Skilled in web design and illustration with a strong foundation in web development. Committed to creating intuitive user experiences with clean, understandable, and self-documenting code. Experience creating a simple backend on Node.JS, working with databases, and using Git and the command line. Completed a three-month internship at Yandex, gaining valuable experience in frontend development.

- > PostgreSQL

- > UI/UX Design [Figma]
- > Illustration [Procreate/Adobe Illustrator]

.hobbies

Digital and traditional drawing, board games, PC games, photography, hiking, horse riding, guitars, music

.experience

Intern Frontend Developer of Yandex Advertising Network

February 2022 – may 2022

Yandex, Saint-Petersburg

My internship consisted of two parts:

1. Product tasks from sprints (fix pagination, fix sending incorrect data to backend, etc.);

2. A big task for the entire internship, the main goal of which was to create new single ESLint configuration for the entire project:

- collect team requirements for code style and divide a large epic into tickets for sprints, evaluate them with the team;

- update versions of all necessary packages and remove unnecessary ones;

- lint the entire project in according with the new configuration and fix the errors that have appeared (make a big refactoring, add new types or interfaces or change existing ones);

- set up precommit hooks and ESLint checks on CI.

I refactored and linted a large legacy project written in different technologies, new and old (Flow - Typescript - JSDoc, React - bem-components, etc.)

I learned how to interact with the team with the SCRUM framework, gained experience in organizing meetings, reading a large amount of code written by another developer
